

DAY-4 DYNAMIC FRONTEND COMPONENTS – [FOOD-HUB]

INTRODUCTION

Welcome to Gul-Kashi Food Hub

The **ultimate destination** for high-quality, delicious, and freshly prepared food. We believe in serving not just meals, but **memorable experiences** filled with taste and satisfaction.

Why Choose Food Hub?

- ✔ **Fresh Ingredients** – We use only the freshest and finest ingredients to prepare our Dishes, ensuring every Bite is perfect.
- ✔ **Fast Delivery** – Enjoy quick and reliable delivery to your doorstep, making your dining experience Hassle-free.
- ✔ **Customer Satisfaction** – With a focus on customer satisfaction, we strive to make every experience Delightful and fulfilling.

What Makes Us Special?

- ✦ **Convenient Payment Options** – Pay easily through **Easy paisa and Jazz Cash**.
- ✦ **Perfect for Everyone** – Specially crafted meals for **students, offices, and families**.
- ✦ **Customizable Meals** – Choose according to your specific taste and preferences.
- ✦ **24/7 Customer Support** – Always here to assist you anytime.
- ✦ **Wide Variety** – From **traditional flavors to international cuisines**, we have it all!

Experience the Best in Food!

At **Food Hub**, we don't just serve food; **we serve happiness**. Join us and explore a world of flavors, convenience, and excellence.

I have built my project, **Gul-Kashi Food Hub**, as a **quick commerce platform**, keeping in mind the needs of the modern era. It provides all the conveniences that allow people to **order food easily, anytime, even in the middle of the night, from the comfort of their homes, without any hassle.**

In addition, whether it's a **picnic spot, office meetings, students, or families**, our platform ensures the **fastest delivery with fresh ingredients.**

Keeping all these factors in mind, I have incorporated the following pages into my project to **connect with as many users/customers as possible and provide them with the best experience:**

Home, About, Chefs, Menu, Shop, FAQ, and Contact Details.

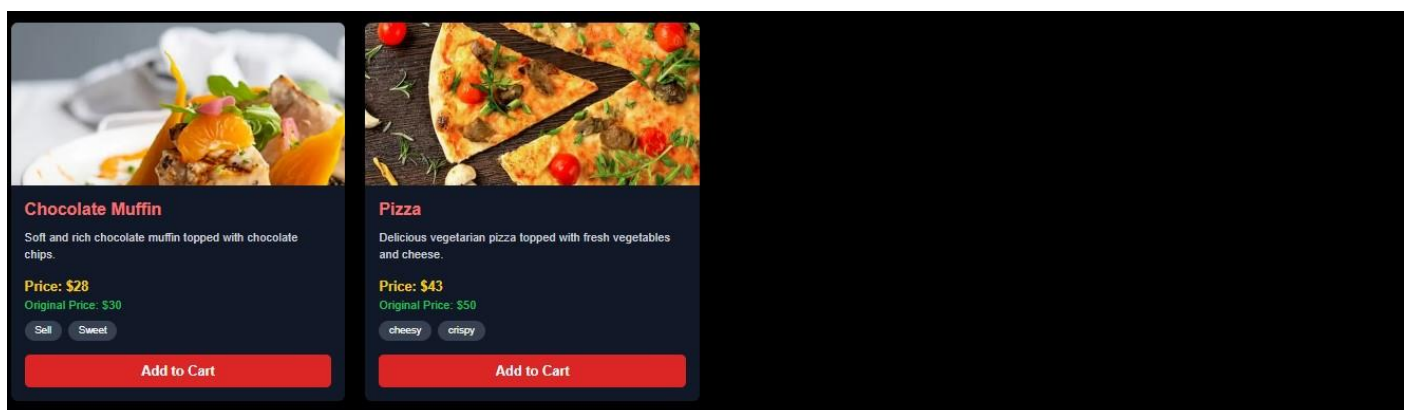

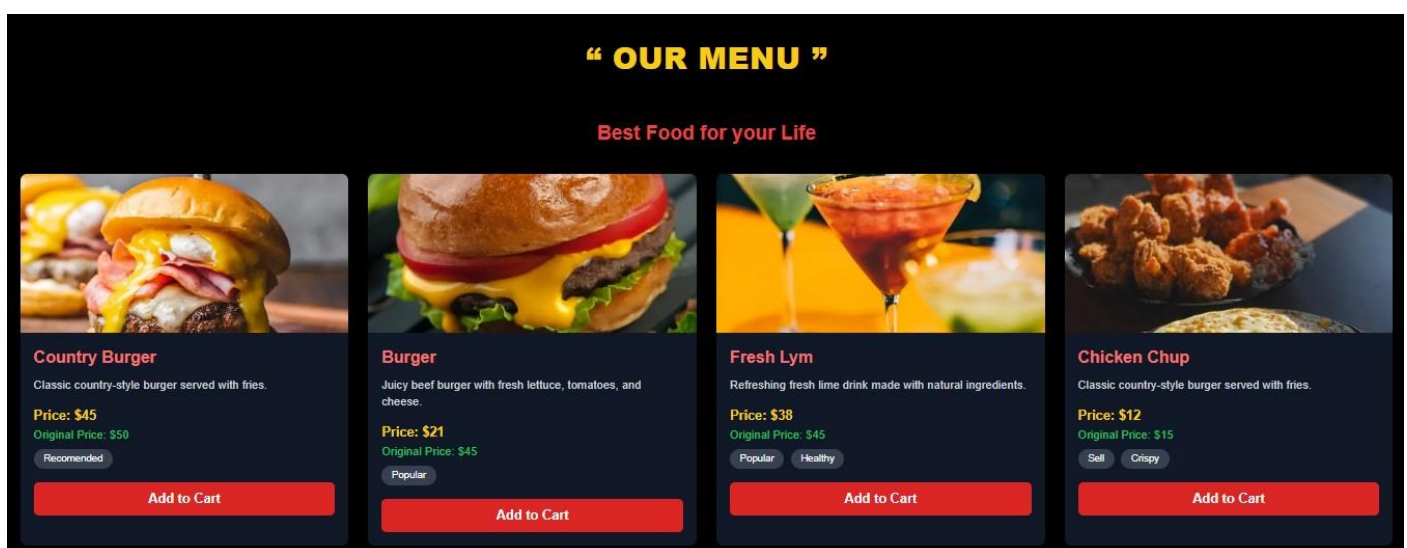

Because....!

We don't just serve food; we serve happiness. 😊🍴👩🍳

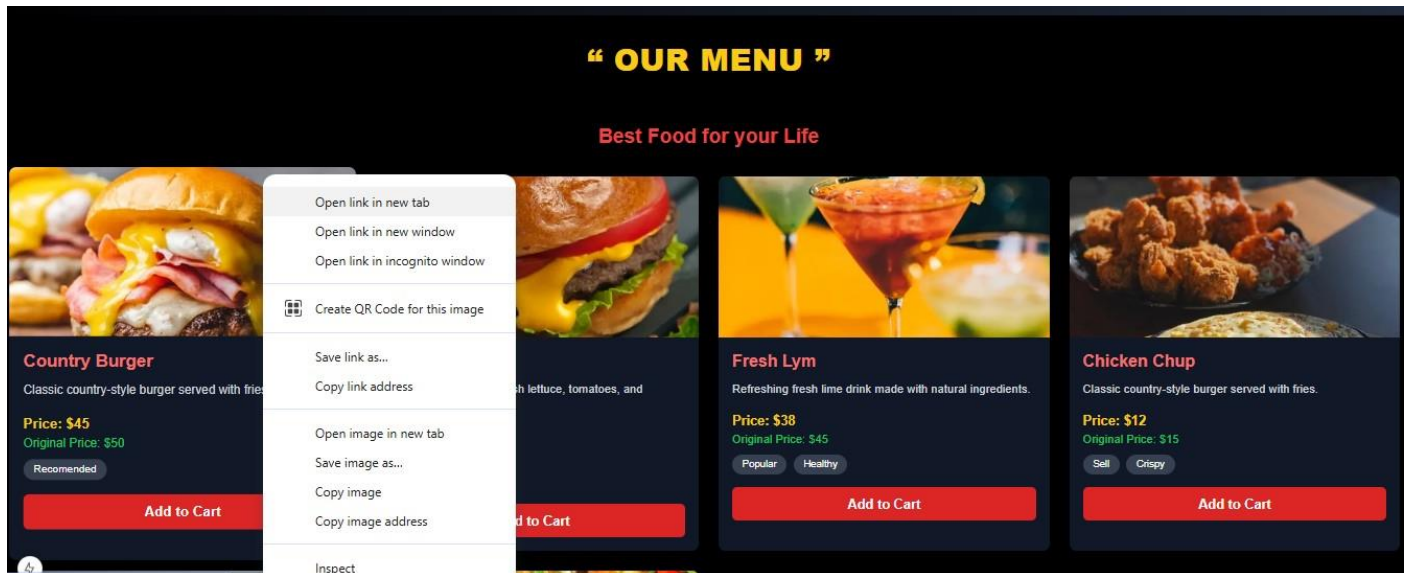

1-API INTEGRATION & DATA MIGRATION:-

As per below screen shots, I have import the data from **Template-9 API** of Sir **Mubashir Imtiaz** through installing the Sanity studio, Schema Type and Script Importdata.mjs code. Below are mine fetched data from Sanity screen shot. On-which I have implemented the **Dynamic routing**.

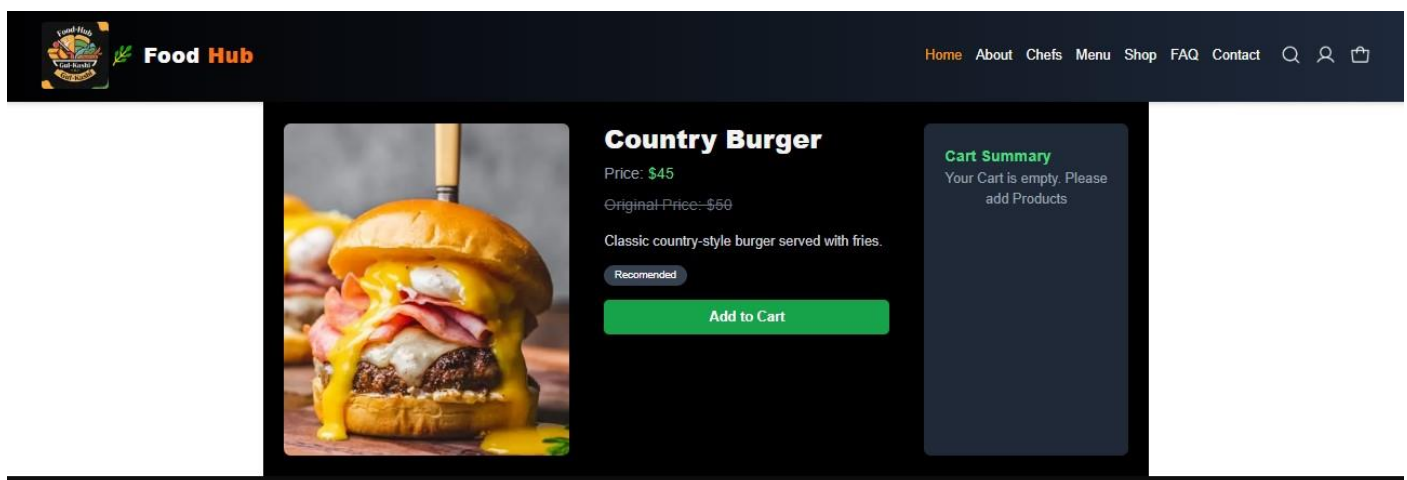

2-Dynamic Routing of Products:-

On-Click of every product, user will find the separate page of this product or he can also open the chosen product on the new page dynamically without any delay or loading.

Product 1

Product 2

**Food Hub**

Home About Chefs Menu Shop FAQ Contact   

Fresh Lym

Price: **\$38**
Original Price: ~~\$45~~

Refreshing fresh lime drink made with natural ingredients.

Dynamic Routing Code:-

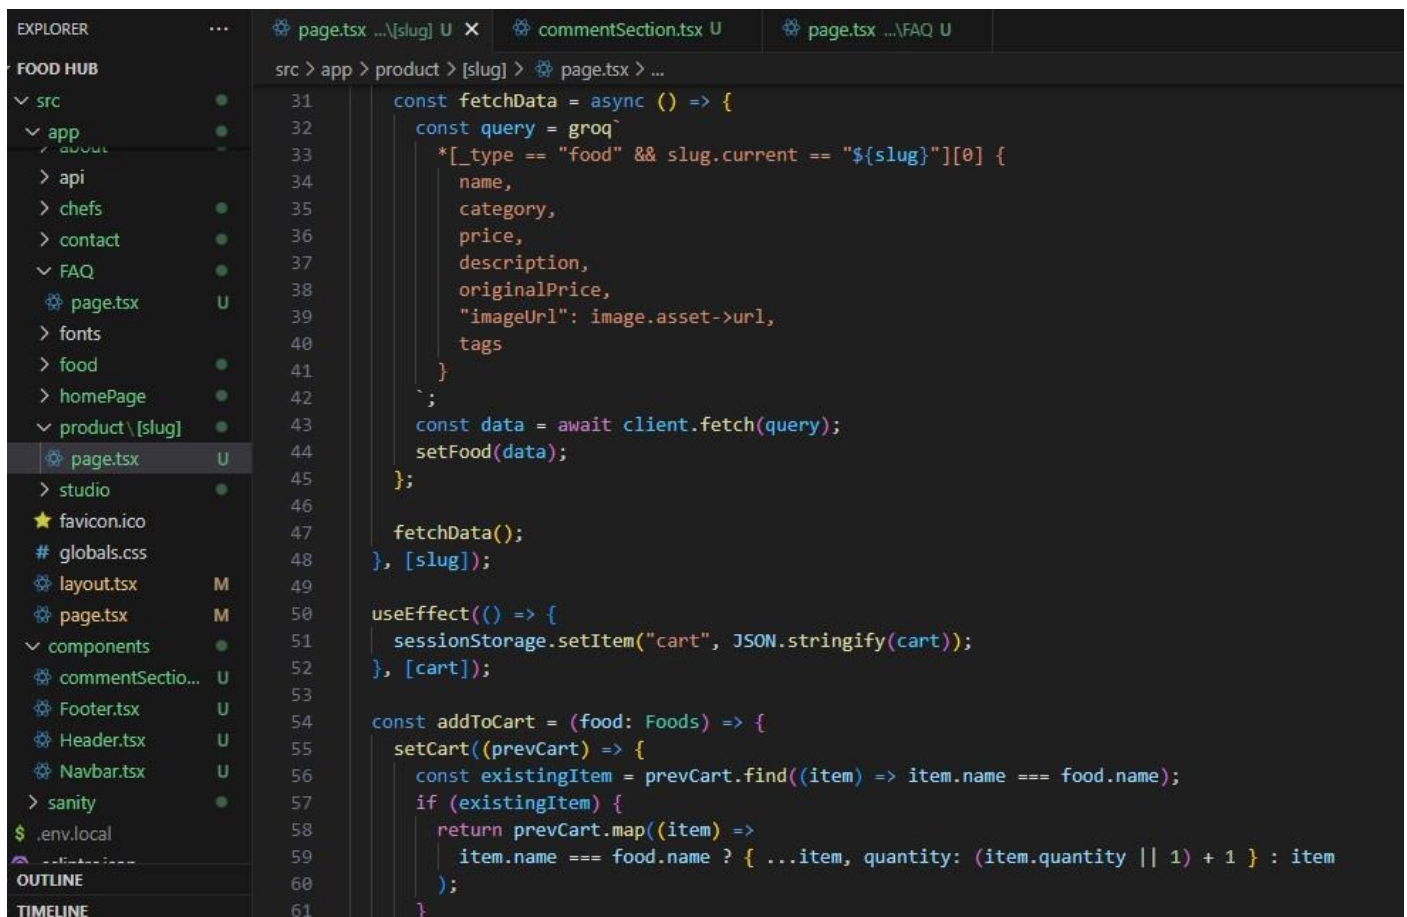

I have made the every product page dynamically through the [Slug] and GROQ Query, which code I am sharing.

1  "use client";
2
3  import { useEffect, useState } from "react";
4  import { useParams } from "next/navigation";
5  import { client } from "@sanity/lib/client";
6  import { groq } from "next-sanity";
7  import Image from "next/image";
8
9  interface Foods {
10    name: string;
11    category: string;
12    description: string;
13    price: number;
14    originalPrice: number;
15    imageUrl: string;
16    tags: string[];
17    quantity?: number;
18  }
19
20  export default function Page() {
21    const params = useParams();
22    const slug = params?.slug as string;
23    const [food, setFood] = useState<Foods | null>(null);
24    const [cart, setCart] = useState<Foods[]>(() => {
25      return typeof window !== "undefined" ? JSON.parse(sessionStorage.getItem("cart") || "[]") : [];
26    });
27
28    useEffect(() => {
29      if (!slug) return;
30
31      const fetchData = async () => {
32        const query = groq`
```

```
31  const fetchData = async () => {
32    const query = groq`
33      *[_type == "food" && slug.current == "${slug}"][0] {
34        name,
35        category,
36        price,
37        description,
38        originalPrice,
39        "imageUrl": image.asset->url,
40        tags
41      }
42    `;
43    const data = await client.fetch(query);
44    setFood(data);
45  };
46
47  fetchData();
48  }, [slug]);
49
50  useEffect(() => {
51    sessionStorage.setItem("cart", JSON.stringify(cart));
52  }, [cart]);
53
54  const addToCart = (food: Foods) => {
55    setCart((prevCart) => {
56      const existingItem = prevCart.find((item) => item.name === food.name);
57      if (existingItem) {
58        return prevCart.map((item) =>
59          item.name === food.name ? { ...item, quantity: (item.quantity || 1) + 1 } : item
60        );
61      }
62    });
63  }
```

3-Tags :-

I have enclosed the Tags along with the products, which screen shots along with code are given below.

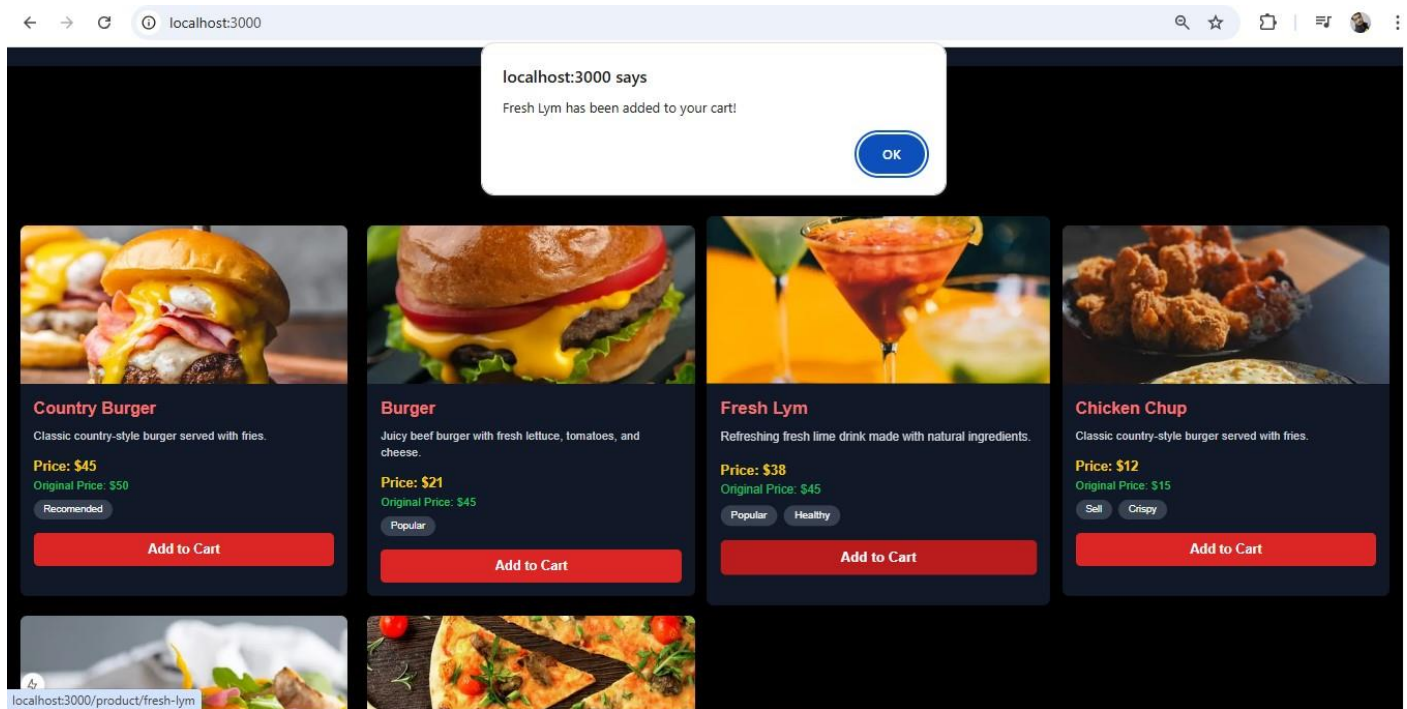

Tags Code:-

```
110
111     <div className="mt-2 flex flex-wrap gap-2">
112         {food.tags.map((tag, index) => {
113             <span
114                 key={index}
115                 className="text-xs bg-gray-700 text-white rounded-full px-3 py-1"
116             >
117                 {tag}
118             </span>
119         )}}
120     </div>
121
```

4-Add to Cart with Functionality:-

Another Functionality I have added in my Food Hub website, which is “**Add to Cart**”. When user visit on the menu page for choosing the products so he can select or buy any product via Add to Cart button.

Ordered Product Cart Summary.

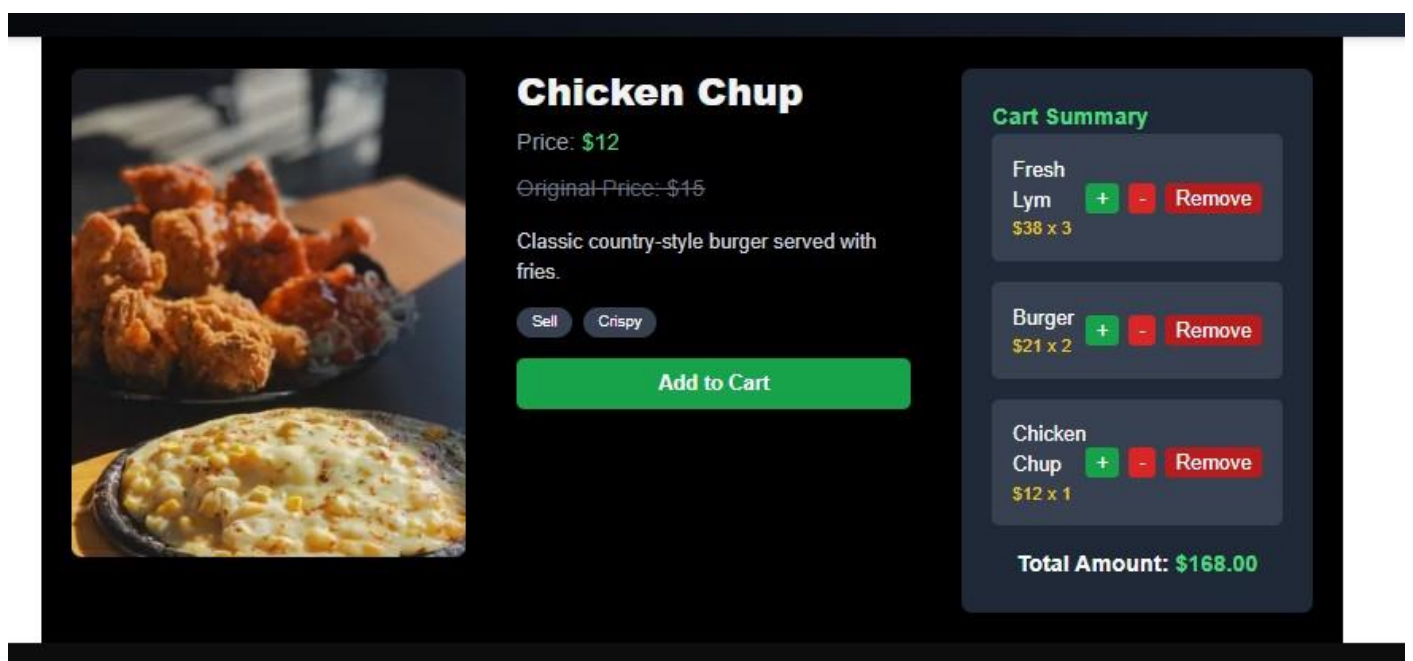

After click on add to cart button, product will be add in his cart list. After that he can add multiple products in his list and his cart summary will be show in-front of him with the ordered quantity and total amount.

Like ...

Decrease Product Cart Summary.

User can also decrease the ordered quantity from his cart summary.

Remove Product from Cart Summary.

User can also remove any product / items from his cart list, which he doesn't want to buy.

Code:-

```
61
62   const addToCart = (food: Foods) => {
63     setCart((prevCart) => [...prevCart, food]);
64     alert(`${food.name} has been added to your cart!`);
65   };
66
67   useEffect(() => {
68     fetchProducts();
69   }, []);
70
71
123   /* Add to cart Functionality */
124   <button
125     className="mt-4 w-full bg-red-600 text-white py-2 rounded-md hover:bg-red-700 transition-all font-
126     onClick={() => addToCart(food)}
127   >
128     Add to Cart
129   </button>
130 </div>
131 </Link>
132 </div>
133   )}
134 </div>
135
136   /* Cart Summary */
137   <div className="mt-8 bg-gray-800 p-6 rounded-lg shadow-md">
138     <h2 className="text-lg font-bold text-red-500">Cart Summary</h2>
139     {cart.length > 0 ? (
140       <ul className="space-y-4">
141         {cart.map((item, index) => (
142           <li
143             key={index}
144             className="flex justify-between items-center bg-gray-700 shadow-sm p-4 rounded-md"
145           >
146             <div>
147               <p className="font-medium text-white">{item.name}</p>
148               <p className="text-sm text-yellow-400">
149                 ${item.price}
150               </p>

```

```

151         <Image
152             src={item?.imageUrl}

158     </div>
159 </li>
160 }}
161 </ul>
162 ) : (
163     <p className="text-gray-400 text-center">
164         Your Cart is empty. Please add Products
165     </p>
166 )}
167 </div>
168 </div>
169 );
170 };
171
172 export default ProductCards;
173

```

5-FAQ Page:-

I have created the FAQ page in my website, where mostly asked users questions of answers are given already or they can ask more questions from us regarding to our services.

Frequently Asked Questions

Your queries, our answers. Find what you need below.

How do we serve food?

How can we get in touch with you?

How is our food quality?

What will be delivered? And when?

How do we give home delivery?

Is this restaurant 24 hours open?

Answers 1

```

7-Contact Details:-

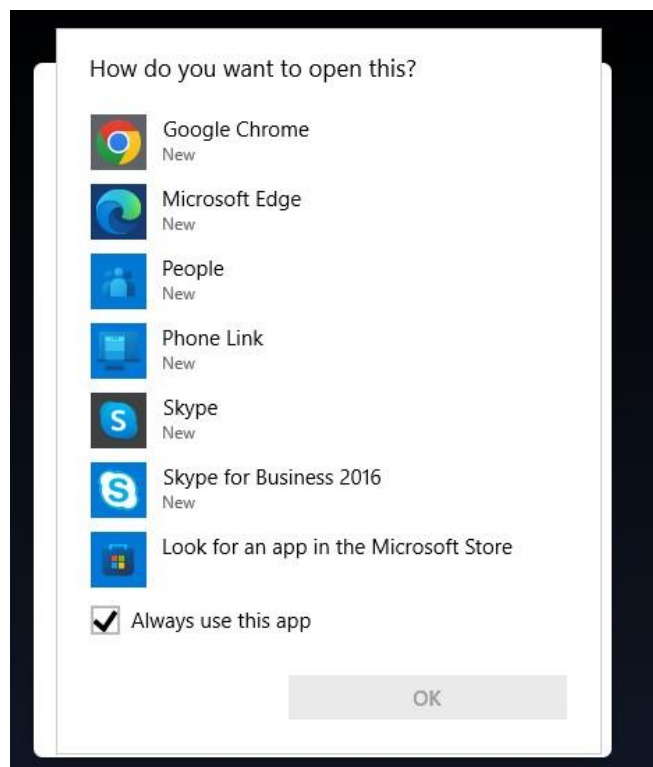

I have added the Contact details page separately for the users to reach & place the order to us.

Upon click on “**Call us Now**” button, alert will show for the users to contact us through the pick an app.

When user will click on pick an app, then another window will open for him to choose or select the app to place the order at our platform.

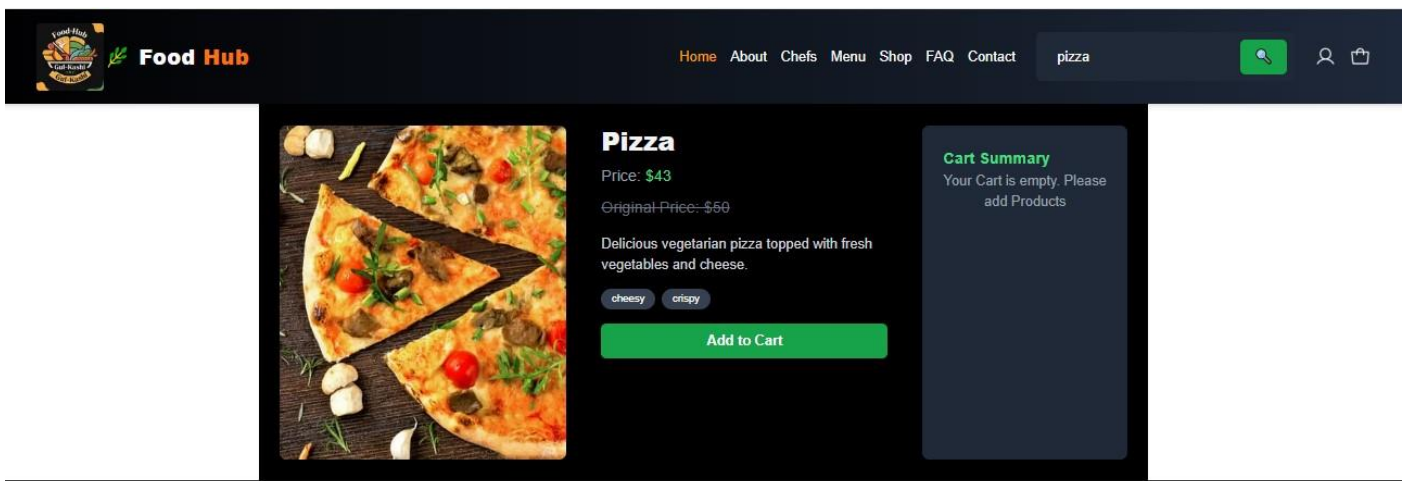

7-Search Bar:-

I have used the Search bar components in my code for the users to search & choose the product quickly. If they don't want to go on menu page and they directly search the product with the name, so this components will directly take them on the chosen product.

After clicking on the “**View product**” button. The separate page of the product will open, where they can add them in their cart list.

Code:-

Search Bar Components.
